

Apparel & Footwear

SKU Background Generation

Contents

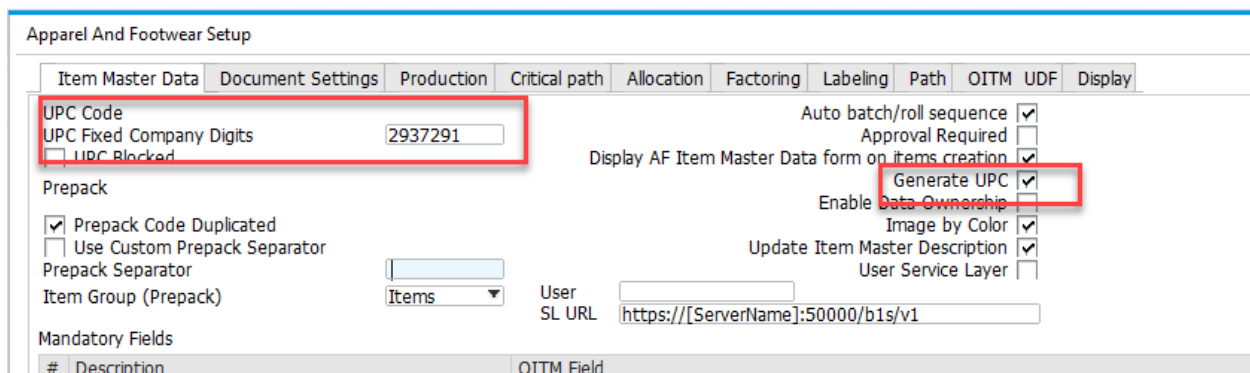

Set up	2
Maintenance	3

Set up

This are 2 threads that runs when the user define in the settings is connected, in this example: manager.

- ✓ Sku background generation: In the style the field SKU STATUS must be C-Create, in order to create skus, or U-Update to update them. By default the value is N-No action.
- ✓ Barcode background generation: In A&F setup / Item master data, field Generate UPC must be selected, and define the UPC fixed company digits.

Note: we recommend the following setting: Run the thread every 30minutes or more
 Also, in number if styles to process you can complete zero, at will means that the service will run all pending skus and barcodes

After this settings were done, please exit SAP and access again to threads starts running

Maintenance

This functionality is available from AFS.43.81.2 version

There is Maintenance option that allows to check skus and barcodes in the queue to be generated.

Apparel and Footwear / Administration / Setup / Background process / Maintenance
